2. Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Frencken (US 6,008,849).

Frencken discloses a method and system for decoding coded video signal comprising the same digital signal processing apparatus comprising: encoded digital signal (fig. 2, el. 110); decoding means constructed by software for decoding said digital signal inputted by said input means; first storing means for storing the digital signal decoded by said decoding means by an amount corresponding to a plurality of access units; and managing means for managing an outputting order of said digital signal of the access units stored in said first storing means by an FIFO format (col. 9, ln. 28-34: since only decoded data of I and P pictures is stored and decoded information relating to B pictures is no longer stored = managing information to be stored in the storing means, line 53 = any storage of decoded information is avoided and col. 7, ln. 33-59) as specified in claims 1, 4 and 5; and digital signal processing apparatus according to

claim 1, wherein said decoding means decodes said digital signal by an MPEG system (col. 3, ln. 29-33) as specified in claim 2
